

# Tricot guidance form for farmers

**test three varieties of a crop and find the right kind suitable to your farm**

## 1 Field preparation

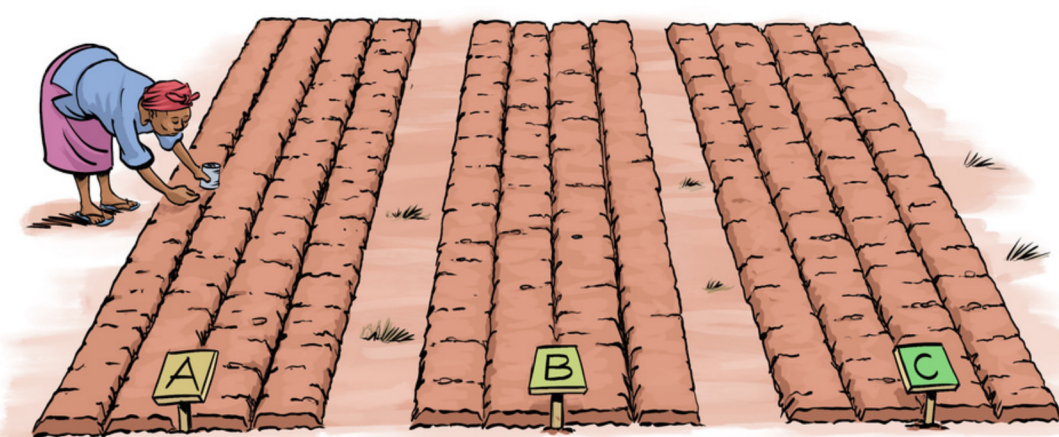

Prepare your field as usual, planning and leaving space for these three new species

## 2 Attend the registration meeting

During the meeting the project staff trains you about how to proceed in your field and gives you the seeds that you will test

## 3 Planting

Plant the three varieties in your field, keeping them properly separated from each other

## 4 Take care of the field

During the growing cycle all your plants should be treated with the same care

5

## Evaluate your crops

Fill the observation card, assessing each of the characteristics of each variety. The card should be completed on designated dates from the time of planting.

6

## Provide information

The project staff will call you and ask you for information you filled in your card.

7

## Results

The project staff invites you to a meeting and shares with you and the rest of participants the results of the experiment
